Azure practice module

https://microsoftlearning.github.io/AZ-104-MicrosoftAzureAdministrator/Instructions/Labs/LAB_0
4-Implement_Virtual_Networking.html#lab-scenario

Task1:Create a virtual network with the name az104-04-vnet1

2. Deploy virtual machines into the virtual network

Task 3: Configure private and public IP addresses of Azure VMs

Task 4: Configure network security groups

Task 5: Configure Azure DNS for internal name resolution

Task 6: Configure Azure DNS for external name resolution

Task 7.What I learned from this assignment?
1.This assignment teaches us 2 important aspects of how to host a internal website(contoso.org) and a external website(rajats.ca) on Azure infrastructure.
2.The way we configure the VMs in a resource group and associate the public IPs through a network interfaces .
3.While establishing a remote RDP connection it is important to associate network interface card with a network security group before establishing the remote RDP connection.
